- Generated over \$100K in additional revenue within 3 months by securing agreements with 68 new subagents in Montreal.

## PROJECTS

**Food Ordering System** — *Online food ordering and management application* [Code](#)

- A PHP and Bootstrap web application that includes login and registration functionalities with input validation using REGEX. It features separate login portals for administrators and customers, ensuring secure access and role-based privileges.
- The registration process utilizes Ajax for username suggestions and form validation for a smoother user experience.
- Used: **PHP, JavaScript, HTML5, CSS, Bootstrap, MySQL, DOM API, Ajax**

**Dice Game in Python** — *Dice Game web application* [Code](#)

- Session variables are used to store the current game state across different pages or interactions with the application.
- Hosted on an AWS EC2 instance and a Virtual Private Cloud (VPC) is created to secure the instance.
- Used: **Python, Flask, Jinja2, JavaScript, Bootstrap, AWS, EC2, Ubuntu Virtual Machine**

**Permission-Management-System** — *Permission-Management web application* [Code](#)

- Developed a front-end and back-end separated project with Swagger-generated API documentation.
- Utilized Spring Security for role-based access control, leveraging Redis caching for efficient authority management. Implemented AOP for logging user activities and user login information.
- Used: **Spring Boot, MyBatis Plus, Spring Security, Node.js, Vue.js, MySQL, Redis, Npm, ElementUI, Axios, RESTful API**
