PROJECTS

Food Ordering System — *Online food ordering and management application*

[Code](#)

- Created user registration/login using PHP sessions and dynamic admin panel to perform entire CRUD.
- Regular expressions and PHP sessions enable maintaining user login state across multiple pages and implementing different headers based on the type of user that is logged in.
- Used: **PHP, HTML5, CSS, JavaScript, MySQL, DOM API**

Dice Game in Python — *Dice Game web application*

[Code](#)

- Session variables are used to store the current game state across different pages or interactions with the application.
- Hosted on an AWS EC2 instance and a Virtual Private Cloud (VPC) is created to secure the instance.
- Used: **Python, Flask, Jinja2, JavaScript, Bootstrap, AWS, EC2, Ubuntu Desktop Environment**

Permission-Management-System — *Permission-Management web application*

[Code](#)

- Implemented CRUD operations for various objects, established corresponding account permissions, and logged the operations in the operation log.
- The login log captures the user's IP address, login status, and login time upon successful login.
- Used: **SpringBoot, MyBatisPlus, SpringSecurity, Node.js, Vue.js, MySQL, Redis, Npm, ElementUI, Axios**
